PROJECTS

Personal Website | *HTML5, CSS, JS, [Git](#)*

February – May 2024

- This is the first project of my life. This project is my personal website, created using HTML and CSS. It features sections for social media links, location with an embedded Google Map, an "About Me" section, and a feedback form. .
- I utilized HTML for the structure and CSS for the styling to create a clean and modern look, JS for making it work and APIs for feedback.

To-Do List | *HTML5, CSS, JS, [Git](#)*

10 July – 12 July 2024

- This is my 1st task of Web.Development domain, the task is about to create a TODO-List using HTML5,CSS,JAVASCRIPT. TODO-List help us to track and note down our daily tasks.To decide what we are planning to do and note it down. .
- The application is designed with a modern, visually appealing UI using custom fonts and styled components. The use of CSS provides a clean and responsive layout that works well on various screen sizes. .

Weather Forecast | *HTML5, CSS, JS, [Git](#)*

15 July – 18 July 2024

- This is my 2nd task of Web_Development domain, the task is about to create a Weather Forecast Web Application.
- This weather app is a sleek, user-friendly tool designed to provide real-time weather updates for any location. Built with HTML, CSS, and JavaScript, it offers a modern, responsive interface featuring a search bar for entering your city. Once you input a location and click the search button, the app fetches weather data from the OpenWeather API, displaying current temperature, weather conditions, humidity, and wind speed. The app features smooth transitions and visually appealing design elements, making it not only functional but also aesthetically pleasing. Ideal for users who want quick and accurate weather information on the go. .

CERTIFICATIONS

Certificate 1: Certified at Design Using AI Tools

Certificate 2 : District Level Winner at Arm Wrestling

WORKING EXPERIENCE

Worked at Calling Center at Kalamboli for 2 Months
